

From Antarctica to Kazakhstan

Facts about Sydtotal HVAC AB's
missions around the world.

To know what to do. And how to do it right.

From biting cold to blistering heat – that's one way of describing our international missions. From the South Pole to Nigeria and from Nigeria to Russia – we turn up wherever there is a need for our competence and our skills.

When we win a new assignment in some strange part of the world, we understand that our reputation has travelled a long way. Every mission has its own agenda and demands a well trained organisation to be successful. That's why we work so hard to get every new project right from the start.

Sydtotal HVAC AB is a company within the Sydtotal Group.

Sydtotal is the fastest growing HVAC company in Scandinavia with a revenue of 600MSEK and 250 employees. Our head office is located in Malmö in the very south of Sweden. Malmö is part of the Öresund region, which puts our head office just a short distance from Copenhagen International Airport. You can reach us from there in just 30 minutes.

We meet the highest international criteria, standards and codes – and we know how to meet local requirements.

To be able to control and run complicated projects you need to have the right kind of working methods and processes. Within the Sydtotal Group we have developed our own overall concept – CAMVent – which takes your project from the drawing board all the way to installation and service. The appropriate CAD drawings, documents, 3-D installation drawings and Operating and Maintenance Manuals are included in every project.

Our HVAC materials are designed to fulfil the demands of the local environment and everything is manufactured in cooperation with Sydtotal Energy Division using the latest technology – providing high efficiency and low energy consumption.

Turn key plant or just rectangular ducts?

We offer you complete buildings with HVAC installations according to your needs – but we also take on smaller projects and have our own manufacturing of rectangular ducts.

Final installations are normally carried out by local contractors – under our supervision. Everything we ship will be in seaworthy crates and/or in containers. To safeguard and ensure that the right items are in the right place at the right time, everything is documented in a packing list using a computerized bar code system for easy tracking.

We reply to every tender request with a firm price, including design, material deliveries and packing based on just your needs.

The Swedish HVAC Designer and Supplier.

Quality is everything to us – especially when it comes to relations with our clients. Fulfilling your requirements is our outspoken ambition and we take pride in delivering the best components and service we can.

Whether it be in Antarctica or Kazakhstan – or wherever else you may be.
